

ATTACKING PLAY

Create a Second Weakness

When one target is fully defended, open play on the opposite wing or create another permanent problem.

Illustrative position after ... Be3 Bg7 f3 O-O

WHY THIS PRINCIPLE EXISTS

A defender can hold one weakness by concentration. Two distant weaknesses stretch pieces beyond their ideal defensive squares.

THE MECHANISM

Why it works

This principle is not magic and it is not a commandment. It is a compressed prediction about local superiority. The useful question is: what changes in the position when the principle is followed?

DIRECT CAUSAL MECHANISM

A defender can hold one weakness by concentration. Two distant weaknesses stretch pieces beyond their ideal defensive squares.

BOARD GEOMETRY

An attack needs open access, controlled flight squares, and enough pieces in the target zone.

OPTION QUALITY

Forcing threats compress defensive choices and can make each tempo more valuable than material.

TIME AND TEMPO

Initiative is temporary; attackers must arrive before defenders consolidate or exchange key units.

WHAT IT PREVENTS

It prevents a recurring class of errors by making a hidden cost visible before the move is played. The principle is valuable because that error pattern appears across many different openings and positions.

RECOGNITION

When to apply it

A principle becomes practical only when you can recognize its trigger. Use the signs below as evidence, then verify the exact position.

- Signal 1: Opponent is tied to one pawn.
- Signal 2: direct breakthrough fails.
- Signal 3: you have space to switch wings..

FOUR-STEP APPLICATION PROTOCOL

1. Notice the trigger without choosing a move yet. 2. Generate at least two candidates, including one that follows the principle. 3. Calculate the opponent's strongest forcing reply. 4. Compare the resulting positions and apply the rule only if the concrete result supports it.

CONVERT IT INTO A BOARD QUESTION

Ask: 'Does this position give me a reason to use the following rule - When one target is fully defended, open play on the opposite wing or create another permanent problem.' Then ask the balancing question: 'What tactical or strategic detail could make this position an exception?'

EXCEPTIONS AND CONFLICTS

Where the slogan breaks

Chess strength comes partly from knowing when two good principles conflict. The better player does not repeat the louder slogan; they rank the actual consequences.

IMPORTANT LIMITATION

Do not abandon a winning direct method to create unnecessary complications. The second weakness should be real and accessible.

DECISION HIERARCHY

- 1. Legal and tactical survival: checks, forced mate, and immediate material loss.
- 2. King safety and forcing initiative: whose threats arrive first?
- 3. Material and conversion: what durable gain remains when activity fades?
- 4. Piece activity, structure, space, and long-term plans.
- 5. The general principle as a tiebreaker between otherwise sound choices.

RED-FLAG TEST

Before following the rule, look for one changed defender, an exposed king, an intermediate move, a pawn break, or a tactical capture. If any exists, calculate it first. A principle explains typical positions; the board decides this position.

WORKED THINKING MODEL

How a strong player uses it

Illustrative position after ... Be3 Bg7 f3 O-O

1. Read the position

Start with local superiority: identify the feature that will remain important after one move.

2. Find the trigger

Look for these signs: Opponent is tied to one pawn; direct breakthrough fails; you have space to switch wings.

3. Produce candidates

Include one forcing move, one move guided by the principle, and one move that prevents the opponent's best idea.

4. Verify

Calculate checks, captures, and threats for the opponent. Try to refute your preferred candidate.

5. Evaluate

Use the mechanism as the explanation, not the proof: A defender can hold one weakness by concentration. Two distant weaknesses stretch pieces beyond their ideal defensive squares.

Note: the board is an illustration for the thinking process, not a claim that one move is forced. Set it up and compare multiple legal candidates.

TRAINING AND RETENTION

Make it automatic

PRIMARY DRILL

Study five technical wins and mark the moment the attacker switched from the first target to the second.

SELF-TEST

- Explain the principle without using its title.
- Name two position signals that make it relevant.
- Give one reason the principle works.
- State the exception that most often causes misuse.
- Describe the calculation check required before applying it.

ANSWER RUBRIC

A strong answer connects the rule - When one target is fully defended, open play on the opposite wing or create another permanent problem. - to its mechanism, names a trigger from a real position, and explains this limitation: Do not abandon a winning direct method to create unnecessary complications. The second weakness should be real and accessible.

SPACED PRACTICE LOOP

Review today, then after 3, 7, 14, and 30 days. On each review, retrieve the idea before opening the PDF. Retire it only when you can recognize the trigger in a fresh position and explain an exception.
