

ADVANCED CALCULATION METHOD

Prune Dominated Candidates

Stop analyzing a candidate when another move produces the same benefits with fewer concrete risks.

Illustrative position after ... d4 cxd4 Nxd4 Nf6

WHY THIS PRINCIPLE EXISTS

Calculation time is scarce. If one move is strictly inferior in activity, safety, and tactical soundness, continuing its tree has little decision value.

THE MECHANISM

Why it works

This principle is not magic and it is not a commandment. It is a compressed prediction about search accuracy. The useful question is: what changes in the position when the principle is followed?

DIRECT CAUSAL MECHANISM

Calculation time is scarce. If one move is strictly inferior in activity, safety, and tactical soundness, continuing its tree has little decision value.

BOARD GEOMETRY

Accurate visualization keeps every piece, blocker, and newly opened line in its updated location.

OPTION QUALITY

Structured branching directs attention to resilient replies instead of multiplying irrelevant legal moves.

TIME AND TEMPO

A stopping rule and candidate discipline convert limited clock time into reliable depth.

WHAT IT PREVENTS

It prevents a recurring class of errors by making a hidden cost visible before the move is played. The principle is valuable because that error pattern appears across many different openings and positions.

RECOGNITION

When to apply it

A principle becomes practical only when you can recognize its trigger. Use the signs below as evidence, then verify the exact position.

- Signal 1: Several candidates deserve analysis.
- Signal 2: the position contains forcing continuations.
- Signal 3: the final evaluation is not obvious.

FOUR-STEP APPLICATION PROTOCOL

1. Notice the trigger without choosing a move yet. 2. Generate at least two candidates, including one that follows the principle. 3. Calculate the opponent's strongest forcing reply. 4. Compare the resulting positions and apply the rule only if the concrete result supports it.

CONVERT IT INTO A BOARD QUESTION

Ask: 'Does this position give me a reason to use the following rule - Stop analyzing a candidate when another move produces the same benefits with fewer concrete risks.' Then ask the balancing question: 'What tactical or strategic detail could make this position an exception?'

EXCEPTIONS AND CONFLICTS

Where the slogan breaks

Chess strength comes partly from knowing when two good principles conflict. The better player does not repeat the louder slogan; they rank the actual consequences.

IMPORTANT LIMITATION

A disciplined method should reduce error, not consume unlimited time. Stop when one move is sufficiently verified for the practical situation.

DECISION HIERARCHY

- 1. Legal and tactical survival: checks, forced mate, and immediate material loss.
- 2. King safety and forcing initiative: whose threats arrive first?
- 3. Material and conversion: what durable gain remains when activity fades?
- 4. Piece activity, structure, space, and long-term plans.
- 5. The general principle as a tiebreaker between otherwise sound choices.

RED-FLAG TEST

Before following the rule, look for one changed defender, an exposed king, an intermediate move, a pawn break, or a tactical capture. If any exists, calculate it first. A principle explains typical positions; the board decides this position.

WORKED THINKING MODEL

How a strong player uses it

Illustrative position after ... d4 cxd4 Nxd4 Nf6

1. Read the position

Start with search accuracy: identify the feature that will remain important after one move.

2. Find the trigger

Look for these signs: Several candidates deserve analysis; the position contains forcing continuations; the final evaluation is not obvious

3. Produce candidates

Include one forcing move, one move guided by the principle, and one move that prevents the opponent's best idea.

4. Verify

Calculate checks, captures, and threats for the opponent. Try to refute your preferred candidate.

5. Evaluate

Use the mechanism as the explanation, not the proof: Calculation time is scarce. If one move is strictly inferior in activity, safety, and tactical soundness, continuing its tree has little decision value.

Note: the board is an illustration for the thinking process, not a claim that one move is forced. Set it up and compare multiple legal candidates.

TRAINING AND RETENTION

Make it automatic

PRIMARY DRILL

Analyze ten positions with a written tree using prune dominated candidates. Compare your tree with the game or engine only after finishing independently.

SELF-TEST

- Explain the principle without using its title.
- Name two position signals that make it relevant.
- Give one reason the principle works.
- State the exception that most often causes misuse.
- Describe the calculation check required before applying it.

ANSWER RUBRIC

A strong answer connects the rule - Stop analyzing a candidate when another move produces the same benefits with fewer concrete risks. - to its mechanism, names a trigger from a real position, and explains this limitation: A disciplined method should reduce error, not consume unlimited time. Stop when one move is sufficiently verified for the practical situation.

SPACED PRACTICE LOOP

Review today, then after 3, 7, 14, and 30 days. On each review, retrieve the idea before opening the PDF. Retire it only when you can recognize the trigger in a fresh position and explain an exception.
